

API

[Reference](#)[Webhooks](#)[Guides](#)[Libraries](#)

Event Types & Payloads

Each event has a similar JSON schema, but a unique `payload` object that is determined by its event type.

Event names are used by [repository webhooks](#) to specify which events the webhook should receive. The included payloads below are from webhook deliveries but match events returned by the [Events API](#) (except where noted). The Events API uses the CamelCased name (e.g. `CommitCommentEvent`) in the `type` field of an event object and does not include the `repository` or `sender` fields in the event payload object.

Note: Some of these events may not be rendered in timelines, they're only created for various internal and webhook purposes.

CreateEvent

Represents a created repository, branch, or tag.

Note: webhooks will not receive this event for created repositories. Additionally, webhooks will not receive this event for tags if more than three tags are pushed at once.

Events API payload

Key	Type	Description
ref_type	string	The object that was created. Can be one of "repository", "branch", or "tag"

ref	string	The git ref (or <code>null</code> if only a repository was created).
master_branch	string	The name of the repository's default branch (usually <code>master</code>).
description	string	The repository's current description.

Webhook event name

create

Webhook payload example

```
{
  "ref": "0.0.1",
  "ref_type": "tag",
  "master_branch": "master",
  "description": "",

DeploymentEvent

Represents a [deployment](#).

Events of this type are not visible in timelines. These events are only used to trigger hooks.

Events API payload

Key	Type	Description
deployment	object	The deployment .
deployment ["sha"]	string	The commit SHA for which this deployment was created.
deployment ["payload"]	string	The optional extra information for this deployment.
deployment ["environment"]	string	The optional environment to deploy to. Default: "production"
deployment ["description"]	string	The optional human-readable description added to the deployment.
repository	object	The repository for this deployment.

Webhook event name

deployment

DeploymentStatusEvent

Represents a deployment status.

Events of this type are not visible in timelines. These events are only used to trigger hooks.

Events API payload

Key	Type	Description
deployment_status	object	The deployment status.
deployment_status["state"]	string	The new state. Can be pending , success , failure , or error .
deployment_status["target_url"]	string	The optional link added to the

		status.
deployment_status["description"]	string	The optional human-readable description added to the status.
deployment	object	The deployment that this status is associated with.
repository	object	The repository for this deployment.

Webhook event name

```
deployment_status
```

Webhook payload example

```
{
  "deployment_status": {
    "url": "https://api.github.com/repos/baxterthehacker/public",

ForkApplyEvent

Triggered when a patch is applied in the Fork Queue.

Events of this type are **no longer created**, but it's possible that they exist in timelines of some users.

Events API payload

Key	Type	Description
head	string	The branch name the patch is applied to.
before	string	SHA of the repository state before the patch.
after	string	SHA of the repository state after the patch.

Webhook event name

```
fork_apply
```

GistEvent

Triggered when a [Gist](#) is created or updated.

Events of this type are **no longer created**, but it's possible that they exist in timelines of some users.

Events API payload

Key	Type	Description
action	string	The action that was performed. Can be "create" or "update"
gist	object	The gist itself.

Webhook event name

gist

GollumEvent

Triggered when a Wiki page is created or updated.

Events API payload

Key	Type	Description
pages	array	The pages that were updated.
pages[][page_name]	string	The name of the page.
pages[][title]	string	The current page title.
pages[][action]	string	The action that was performed on the page. Can be "created" or "edited".
pages[][sha]	string	The latest commit SHA of the page.
pages[][html_url]	string	Points to the HTML wiki page.

Webhook event name

gollum

Webhook payload example

```
{
  "pages": [

IssueCommentEvent

Triggered when an [issue comment](#) is created, edited, or deleted.

Events API payload

Key	Type	Description
action	string	The action that was performed on the comment. Can be one of "created", "edited", or "deleted".
changes	object	The changes to the comment if the action was "edited".
changes[body][from]	string	The previous version of the body if the action was "edited".
issue	object	The issue the comment belongs to.
comment	object	The comment itself.

Webhook event name

issue_comment

Webhook payload example

IssuesEvent

Triggered when an [issue](#) is assigned, unassigned, labeled, unlabeled, opened, edited, milestoned, demilestoned, closed, or reopened.

Events API payload

Key	Type	Description
action	string	The action that was performed. Can be one of "assigned", "unassigned", "labeled", "unlabeled", "opened", "edited", "milestoned", "demilestoned", "closed", or "reopened".
issue	object	The issue itself.
changes	object	The changes to the issue if the action was "edited".
changes[title][from]	string	The previous version of the title if the action was "edited".
changes[body][from]	string	The previous version of the body if the action was "edited".
		The optional user who

assignee	object	was assigned or unassigned from the issue.
label	object	The optional label that was added or removed from the issue.

Webhook event name

issues

LabelEvent

Triggered when a repository's label is [created](#), [edited](#), or [deleted](#).

Events of this type are not visible in timelines. These events are only used to trigger hooks.

Events API Payload

Key	Type	Description
action	string	The action that was performed. Can be "created", "edited", or "deleted".
label	object	The label that was added.
changes	object	The changes to the label if the action was "edited".
changes[name][from]	string	The previous version of the name if the action was "edited".
changes[color][from]	string	The previous version of the color if the action was "edited".

Webhook event name

label

MembershipEvent

Triggered when a user is added or removed from a team.

Events of this type are not visible in timelines. These events are only used to trigger hooks.

Events API payload

Key	Type	Description
action	string	The action that was performed. Can be "added" or "removed".
scope	string	The scope of the membership. Currently, can only be "team".
member	object	The user that was added or removed.
team	object	The team for the membership.

Webhook event name

membership

Webhook payload example

```
{
  "action": "added",
  "scope": "team",
  "member": {

MilestoneEvent

Triggered when a milestone is created, closed, opened, edited, or deleted.

Events of this type are not visible in timelines. These events are only used to trigger hooks.

Events API payload

Key	Type	Description
action	string	The action that was performed. Can be one of "created" , "closed" , "opened" , "edited" , or "deleted" .
milestone	object	The milestone itself.
changes	object	The changes to the milestone if the action was "edited" .
changes[description][from]	string	The previous version of the description if the action was

		"edited" .
changes[due_on][from]	string	The previous version of the due date if the action was "edited" .
changes[title][from]	string	The previous version of the title if the action was "edited" .

Webhook event name

milestone

Webhook payload example

```
{
  "action": "created",

OrganizationEvent

Triggered when a user is added, removed, or invited to an Organization.

Events of this type are not visible in timelines. These events are only used to trigger organization hooks.

Events API payload

Key	Type	Description
action	string	The action that was performed. Can be one of "member_added" , "member_removed" , OR "member_invited" .
invitation	object	The invitation for the user or email if the action is "member_invited" .
membership	object	The membership between the user and the organization. Not present when the action is "member_invited" .
organization	object	The organization in question.

Webhook event name

organization

Webhook payload example

```
{
  "action": "member_invited",
  "invitation": {
    "id": 3294302,

```

PageBuildEvent

Represents an attempted build of a GitHub Pages site, whether successful or not.

Triggered on push to a GitHub Pages enabled branch (`gh-pages` for project pages, `master` for user and organization pages).

Events of this type are not visible in timelines. These events are only used to trigger hooks.

Events API payload

Key	Type	Description
build	object	The page build itself.

Webhook event name

`page_build`

Webhook payload example

```
{
  "id": 15995382,
  "build": {
    "url": "https://api.github.com/repos/baxterthehacker/public",
    "status": "built",
    "error": {
      "message": null
    },
    "pusher": {
      "login": "baxterthehacker",
```

PullRequestEvent

Triggered when a [pull request](#) is assigned, unassigned, labeled, unlabeled, opened, edited, closed, reopened, or synchronized.

Events API payload

Key	Type	Description
		The action that was performed. Can be one of "assigned", "unassigned", "labeled", "unlabeled", "opened", "edited", "closed", or "reopened". If the

action	string	action is "closed" and the merged key is false , the pull request was closed with unmerged commits. If the action is "closed" and the merged key is true , the pull request was merged. While webhooks are also triggered when a pull request is synchronized, Events API timelines don't include pull request events with the "synchronize" action.
number	integer	The pull request number.
changes	object	The changes to the comment if the action was "edited".
changes[title][from]	string	The previous version of the title if the action was "edited".
changes[body][from]	string	The previous version of the body if the action was "edited".
pull_request	object	The pull request itself.

Webhook event name

```
pull_request
```

Webhook payload example

```
{  
  "action": "opened",  
  "number": 1,
```

```

PullRequestReviewEvent

Triggered when a pull request review is submitted into a non-pending state.

Events API Payload

Key	Type	Description
action	string	The action that was performed. Can be "submitted"
pull_request	object	The pull request the review pertains to
review	object	The review that was affected

Webhook event name

```
pull_request_review
```

Webhook payload example

```
{

PullRequestReviewCommentEvent

Triggered when a comment on a Pull Request's unified diff is created, edited, or deleted (in the Files Changed tab).

Events API payload

Key	Type	Description
action	string	The action that was performed on the comment. Can be one of "created", "edited", or "deleted".
changes	object	The changes to the comment if the action

		was "edited".
changes[body][from]	string	The previous version of the body if the action was "edited".
pull_request	object	The pull request the comment belongs to.
comment	object	The comment itself.

Webhook event name

```
pull_request_review_comment
```

Webhook payload example

PushEvent

Triggered when a repository branch is pushed to. In addition to branch pushes, webhook `push` events are also triggered when repository tags are pushed.

The Events API `PushEvent` payload is described in the table below. The example payload below that is from a webhook delivery and will differ from the Events API `PushEvent` payload.

Events API payload

Key	Type	Description
ref	string	The full Git ref that was pushed. Example: "refs/heads/master" .
head	string	The SHA of the most recent commit on <code>ref</code> after the push.
before	string	The SHA of the most recent commit on <code>ref</code> before the push.
		The number of

size	integer	commits in the push.
distinct_size	integer	The number of distinct commits in the push.
commits	array	An array of commit objects describing the pushed commits. (The array includes a maximum of 20 commits. If necessary, you can use the Commits API to fetch additional commits. This limit is applied to timeline events only and isn't applied to webhook deliveries.)
commits[][sha]	string	The SHA of the commit.
commits[][message]	string	The commit message.
commits[][author]	object	The git author of the commit.
commits[][author][name]	string	The git author's name.
commits[][author][email]	string	The git author's email address.
commits[][url]	url	Points to the commit API resource.
commits[][distinct]	boolean	Whether this commit is distinct from any that have been pushed before.

Webhook event name

push

RepositoryEvent

Triggered when a repository is created, deleted, made public, or made private.

Events of this type are not visible in timelines. These events are only used to trigger hooks.

Events API payload

Key	Type	Description
action	string	The action that was performed. This can be one of "created", "deleted", "publicized", or "privatized".
repository	object	The repository itself.

Webhook event name

repository

Webhook payload example

```
{
  "action": "created",
  "repository": {
    "id": 27496774,
    "name": "new-repository",
    "full_name": "baxterandthehackers/new-repository",

StatusEvent

Triggered when the status of a Git commit changes.

Events of this type are not visible in timelines. These events are only used to trigger hooks.

Events API payload

Key	Type	Description
sha	string	The Commit SHA.
state	string	The new state. Can be <code>pending</code> , <code>success</code> , <code>failure</code> , or <code>error</code> .
description	string	The optional human-readable description added to the status.
target_url	string	The optional link added to the status.
branches	array	An array of branch objects containing the status' SHA. Each branch contains the given SHA, but the SHA may or may not be the head of the branch. The array includes a maximum of 10 branches.

Webhook event name

status

Webhook payload example

```
{
  "id": 214015194,

TeamEvent

Triggered when an organization's team is created or deleted.

Events of this type are not visible in timelines. These events are only used to trigger organization hooks.

Events API payload

Key	Type	
action	string	
team	object	
changes	object	
changes[description][from]	string	
changes[name][from]	string	

changes[privacy][from]	string
changes[repository][permissions][from][admin]	boolean
changes[repository][permissions][from][pull]	boolean
changes[repository][permissions][from][push]	boolean
repository	object

Webhook event name

team

Webhook payload example

```
{
  "action": "created",
  "team": {
    "name": "team baxter",
    "id": 2175394,
    "slug": "team-baxter",
    "description": ""
  }
}
```

```

TeamAddEvent

Triggered when a repository is added to a team.

Events of this type are not visible in timelines. These events are only used to trigger hooks.

Events API payload

Key	Type	Description

team	object	The team that was modified. Note: older events may not include this in the payload.
repository	object	The repository that was added to this team.

Webhook event name

```
team_add
```

Webhook payload example

```
{
  "team": {
    "name": "github",
    "id": 836012,
    "slug": "github",

```

WatchEvent

The WatchEvent is related to [starring a repository](#), not [watching](#). See this [API blog post](#) for an explanation.

The event's actor is the [user](#) who starred a repository, and the event's repository is the [repository](#) that was starred.

Events API payload

Key	Type	Description
action	string	The action that was performed. Currently, can only be <code>started</code> .

Webhook event name

watch

Webhook payload example

```
{
  "action": "started",
